

What I claim as my invention is:

1. A protective phone cover comprising:
 - (a) an ear piece portion, the ear piece portion including a front face,
 - (b) a mouth piece portion, the mouth piece portion including a front face,
 - (c) a connector having two ends, a first end and a second end, the first end connected to the ear piece portion, the second end connected to the mouth piece portion, and
 - (d) a plurality of holes located on the front face of the ear piece portion and the front face of the mouth piece portion.
2. A protective phone cover according to claim 1 wherein the protective phone cover further comprises a tear-away portion, the tear-away portion removably attached to the mouth piece portion, wherein removal of the tear-away portion will allow placement of the protective phone cover over a telephone, and further wherein the tear-away portion could be used as a finger protector while dialing numbers after the tear-away portion has been removed from the protective phone covering.
3. A protective phone cover according to claim 1 wherein the protective phone cover would be fabricated from a flexible material.
